

1 Non-Functional Requirements

Requirement	Priority Weight	Description
REQ-1	5	The Android interface shall have a minimal number of navigation menus; the user should not need more than three taps to find the information he needs
REQ-2	5	The user shall not be able to directly modify any data in the database. All data must be programmatically gathered and processed
REQ-3	4	The user shall use his same credentials for login on the mobile application as he will use for the website
REQ-4	3	The web interface shall have a minimal, but sufficient number of options to display different information about the user's workout.
REQ-5	3	The user should wear the device only during an actual workout; the device will not provide useful information if it is worn when the user is not exercising.
REQ-6	3	Both the web site and the Android application should be intuitive and simple to use.
